IPCC PRESS RELEASE

17 April 2014

IPCC seeks comment on the Synthesis Report of its Fifth Assessment

GENEVA, 17 April - The expert and government review of the first order draft of the Synthesis Report of the Intergovernmental Panel on Climate Change (IPCC) starts on Monday 21 April. The Synthesis Report is the final product of the Fifth Assessment cycle. It will integrate key messages from the three recent working group reports: the physical science basis (September 2013), climate change impacts, adaptation, and vulnerability (March 2014), and mitigation (April 2014).

The IPCC seeks the widest possible participation by experts in the reviews of its draft reports. Reviewers should reflect the full range of scientific, technical, and socio-economic views, expertise, and geographical representation.

The IPCC Chair, who leads the Synthesis Report writing team, is seeking input from expert reviewers with knowledge or experience to provide scientific review comments on the physical science basis; impacts, adaptation, vulnerability; and mitigation of climate change. The draft report will also be reviewed by the member governments of the IPCC. The review period runs until 13 June. To ensure transparency, all the comments and the responses from the authors will be published with the drafts after the reports are released.

Registration for participation in the review is now open. Experts who are interested are invited to register at: <http://www.ipcc-syr.nl/review/registration/>

Please feel free to disseminate this review registration link within your professional networks.

Note for editors

The IPCC provides governments with a clear view of the current state of knowledge about the science of climate change, its potential impacts, and options for adaptation and mitigation, through regular assessments of the most recent information published in scientific, technical and socio-economic literature worldwide. IPCC assessments are policy-relevant, but not policy-prescriptive.
